

Amager: Community Sustainability Projects

Miljøpunkt Amager is a local environment centre that promotes and supports sustainable development on a local level in the Copenhagen municipality districts located on the island of Amager. In collaboration with Miljøpunkt Amager, a need was identified for an informational pamphlet in English about environmental activities and initiatives on Amager. The pamphlet will be made available through Miljøpunkt Amager's office as promotional material to be distributed to interested parties in the public and private sector. Examples of interested parties would be:

- Visit Copenhagen (Copenhagen's official tourist board)
- Urban planning & environment committees within the districts of Amager
- International and national travel trade shows & exhibitions

Seven environment related activities were documented through pictures and research gathering. The selected activities are amongst the projects involving people who care about environmental conservation and the livelihood of their communities.
